

**C.B. KNOBS
PART NO. 2-526**

We have found that some knob sets may be a little difficult to install and we suggest the following:

- 1) Apply more pressure when trying to install knob over spindle, or;
- 2) Round out the metal clip insert in the back of the knob, curved side, which is causing the knob to install hard, or;
- 3) Remove the metal clip provided and substitute it with the OEM metal clip.

We are sorry for any inconvenience you experience.
