

NEW PRODUCT RELEASE

Elliptical Light Bars

For Immediate Release – Show Chrome Accessories® introduces their new Elliptical Light Bars. These new light bars offer all the features and benefits long sought after in a low profile light bar. They are designed with cast aluminum housings permanently attached to a formed steel tube without any welds. This ingenious design eliminates the possibility of vibration breaking the welds and having the light bar fail. The formed steel tube has an elliptical shape adding a handsome, unique contour while increasing the strength of the light bar. All wiring is routed internally for a clean custom look. A switch is included that can be mounted in a side cover for turning the light bar on and off as desired. The 50 watt focused beam mini halogens offer remarkable lighting with a cool fresh look. With our new 55 watt 3 ½” halogen lights, the bike takes on a more traditional retro feel.

Fitments are available for most current Honda, Kawasaki, Suzuki, and Yamaha cruisers.
